T1 we can assume that x_i is the i'th product's amount.

So we can set an IP problem like that:

$$\text{maximize} \quad Z = 9x_1 + 4x_2 + 3x_3 + 2x_4 + \tfrac{1}{2}x_5$$

$$\text{s.t} \quad 7x_1 + 5x_2 + 4x_3 + 3x_4 + x_5 \le 13.$$

$$x_1, x_2, x_3, x_4, x_5 \ge 0, \text{ integer.}$$

T2. Assume that x_i express whether i'th player in the starting lineup of the team.

$x_i \in \{0, 1\}$.

So we can set up an IP problem like that:

$$\text{maximize} \quad Z = 3x_1 + 2x_2 + 2x_3 + x_4 + 3x_5 + 3x_6 + x_7.$$

$$\text{s.t.} \quad x_1 + x_2 + x_3 + x_4 + x_5 + x_6 + x_7 = 5$$

$$x_1 + x_3 + x_5 + x_7 \ge 4$$

$$x_3 + x_4 + x_5 + x_6 + x_7 \ge 2$$

$$x_2 + x_4 + x_6 \ge 1$$

$$3x_1 + 2x_2 + 2x_3 + x_4 + 3x_5 + 3x_6 + 3x_7 \ge 10$$

$$3x_1 + x_2 + 3x_3 + 3x_4 + 3x_5 + x_6 + 2x_7 \ge 10$$

$$x_1 + 3x_2 + 2x_3 + 3x_4 + 3x_5 + 2x_6 + 2x_7 \ge 10$$

$$x_3 + x_6 \le 1.$$

$$x_4 + x_5 \ge 2x_1$$

$$x_2 + x_3 = 1.$$

$$x_1, x_2, \cdots, x_7 \in \{0, 1\}.$$
